

DIODO

SEMICONDUCTORES - DIODO

Los **semiconductores** son elementos que poseen un comportamiento de características intermedias entre aislantes y conductores.

Son fuertemente dependientes de la temperatura.

El diodo es uno de los dispositivos semiconductores más simples.

Elemento real y símbolo eléctrico

Característica I - U

MODELOS DEL DIODO

La característica I-U puede aproximarse de diversas maneras, según el grado de error admisible para cada aplicación, dando origen a varios modelos de funcionamiento.

A menos que se indique lo contrario, se utilizará el **modelo IDEAL** del diodo

CIRCUITOS CON DIODO - RECORTADORES

CIRCUITOS CON DIODO - RECORTADORES

Circuitos de la filmina anterior

CIRCUITOS CON DIODO — COMPUERTAS LÓGICAS

Uf es de contínua

Las tensiones U1, U2, U3 y Us pueden valer 0 ó Uf
